8. Data Lake Advanced Settings

Connections

You can choose to only allow access to the instance from Business Technology Platform (BTP) which is the default, allow all access, or only from trusted IP addresses by specifying IP address filter ranges.

⚠ Changing the allowed IP addresses in data lake does not automatically sync the new settings to your SAP HANA database. You have to edit your SAP HANA database settings individually for them to match.

If you select to only allow SAP BTP, then you will not be able to connect using tools such as dbisql.

Allowed connections: *

Allow only BTP IP addresses

Allow specific IP addresses and IP ranges (in addition to BTP)

Backup

Backup Database Automatically:

Disabled (-)
